

Floor-Mounted Column (fixed position)

The WeldPro 360 lineup, offers pre-engineered floor mounted columns—in either 8' or 10' arm heights—that bolt directly to your concrete floor. Available are a full complement of optional bolt-on brackets for mounting all components allowing customizable installations. This column requires no modifications to the building structure beyond the 8 base mounting epoxy anchor bolts. Its advantage is in fast setup, no engineering or fabrication work and is not limited to existing building column locations. The entire column and each of the high-quality mounting brackets are powder coated for a finished look and long-term durability.

- Requires only basic hand tools to install.
- Provides fast setup time for your boom arm (can be done in 1-2 days).
- Moving to a new location in the future requires re-anchoring to the floor.
- The column comes with pre-engineered, drilled and tapped mounting locations for all bolt-on options.
- Advantage – well organized installation with everything off the floor.

Mounting Bracket Options

- The Boom Arm Pivot and the Boom Arm Control Box come with the purchased boom arm and simply bolt to the column.
- Weld Wire Spool Cabinet – optional (up to 2 cabinets can be mounted per column) and simply bolt to the column.
- Inert Gas Cylinder Mount—optional, bolts to column.
- Equipment Platform Mount—optional, for mounting welder power supply, fume extractor or other items of choice and bolts to the column.
- Bulk Wire Mount—optional, bolts to the column.
