

Boom Mounts for Straight Building Columns (non-tapered)

The WeldPro 360 lineup, offers a complete set of bolt-on brackets to mount your boom arm and auxiliary components to an existing round pipe or square tube, building column. Each mounting bracket is designed to quickly bolt to the column—in a clamping action—requiring no modifications to the building structure. These high-quality, powder coated brackets make for a quick and secure installation of your welding boom with no engineering or fabrication work required.

- Brackets are available for 6", 7" and 8" sq. tube and 6" and 8" round pipe column sizes.
- The clamp-on design, eliminates modifications to the building column.
- Requires only basic hand tools to install.
- Provides the fastest setup time for your boom arm (can be done in less than 1-day).
- Easily moved to a new location in the future, if requirements change.

Mounting Bracket Options

- Boom Arm Pivot Mount (required)
- Drop Mount for mounting the boom control box for 18' arms.
- Additional Drop Mount(s) for mounting a Wire Spool Cabinet (up to 2).
- Inert Gas Cylinder Mount.
- Platform Mount for mounting welder power supply or bulk-wire drum.
